Mr. John Krecek
JFK Electrical Contracting Enterprises, Inc.
1439 W. San Angelo
Gilbert, Arizona 85233

Subject: Letter of Reference, Deign Build/Preconstruction, Southwest Ambulance.

To whom it may concern,

We recently have had the pleasure of working with JFK on the new campus for Southwest Ambulance. This is a high profile project located in Mesa Arizona, including of approximately 130,000 SF of new construction, comprised of four buildings and a fully developed campus site. The delivery method for the project, from Concord to the owner, is "Construction Manager at Risk" with a "Guaranteed Maximum Price". The relationship and role of JFK is "Design-Build Constructor". All design responsibility for electrical scope lies with the JFK team.

Throughout the entire design/preconstruction phase, JFK, combined with their design consultant Manny Hammner, of Associated Engineering, provided cutting edge design, constructability review as well as budgeting and estimating services. The JFK/Associated team was able to couple early design programming with accurate conceptual estimating, helping insure the success of the project design and budget. Further, it should be noted that both JFK and Associated Engineering met all design and budgeting deliverables and deadlines throughout the process.

I would, without hesitation, strongly recommend utilizing JFK for this type of project delivery. I look forward to working with the JFK team on future Concord projects.

Respectfully,

Gary T. Jones
Director of Estimating and Preconstruction
