

To Who it May Concern:

Dear Sir or Madam:

Recently, my project team and I completed a difficult renovation/expansion project at Banner Desert Medical Center. The project was an Education Center for Medical Teaching and Learning. This project was especially challenging due to the high-end finishes and the complicated electrical/audio-visual systems for this space. The lighting and dimming systems were also integrated into the A/V system and took careful coordination on the part of the electrical contractor.

It was my great pleasure to be able to work on this difficult project with a qualified electrical Subcontractor such as JFK Electric. Due to the complexity of the systems, JFK's foreman worked closely with the Architect during the pre-con phase to ensure that the lighting package was properly coordinated. On a few occasions when a pre-existing field condition arose, which did not match the drawings, JFK was quick to investigate the situation and offer solutions in a timely manner in order to keep the electrical activities on schedule. I have worked with several electrical Subcontractors on other projects and I would recommend JFK Electric without hesitation. They have always worked on projects with the Owner's best interest in mind and have gone out of their way to treat all parties fairly and be a true team player.

Please do not hesitate to contact me if any further information is required.

Sincerely,

**Ryan Hook**
